Special Instructions		

IMPORTANT INFORMATION TO READ PRIOR TO SHIIPING

Cleaning of Parts: Please make sure your parts are degreased, clean and dry before shipping. Do not send parts that are dripping with oil. Parts can be cleaned with brake cleaner or another type of degreaser.

What to Remove: Make sure there are no bushings, bearings, seals, races, rubber, plastic, valve stems, weights or labels with your parts. Please remove these items prior to shipment.

Sandblasting: Most parts require sandblasting and hand sanding prior to powder coating. Blasting charges vary due to the difficulty of the part to be blasted.

Masking: We are very familiar with what needs to be masked and will automatically do this. When required we will use silicon plugs and high temperature tape. If you have a specific request, please state under "Special Instructions."

Shipping Charges: Parts will be shipped via UPS ground unless otherwise specified. All parts will be wrapped and packed to arrive in excellent condition. Performance Powder Coating is not responsible for extreme damages caused by the shipping company.

Disclaimer: Performance Powder Coating is not responsible for the structural integrity of items due to age and condition prior to restorations. Performance Powder Coating is not responsible for holes, due to rust after the sandblasting process or breakage of bolts during the disassembly or assembly process.
